Time	2019
Status	Competition shortlisted

The challenges Xiaomeisha is faced with including destruction of extreme weather, the lack of species diversity caused by infrastructure cutting off the biological chain, the lack of high-quality space, good experience and brand image. We hope that people will have an immersive experience of nature in Xiaomeisha. With the theme of "Life Coast, Charming Coral Bay", we are committed to making Xiaomeisha coast zone a resilient, ecological and sustainable brand resort. The resilient mountain, sea and city boundary, together with wave-cutting coral reef system, build a resilient disaster prevention mechanism that integrates sea and land to withstand the effects of extreme weather, rising sea levels and stormy waves. "Life Coast" integrates mountain, sea and city, based on safety, to create a biodiversity system. The three-dimensional coast, through 3D traffic, five transportation hubs and TOD principle, achieves a comprehensive improvement of regional travel experience from congestion to order, from low-carbon to zero-carbon. "Charming Coast" explores the extension of the tourism brand in Xiaomeisha through resources integration of five major resource systems of mountain, forest, city, beach and sea.
