Scale	35.63 HA
Collaborator	TADI Kragh & Berglund Landscape (Beijing/Copenhagen) HAO Architecture (New York) Buro Happold (Beijing/Hong Kong)
Time	2012
Status	Competition 1st prize

Tianjin Eco-City is a livable and ecological area developed under the cooperation between China and Singapore. As the first eco-city in China and the first eco-city designed through multinational cooperation, it will become a showroom of sustainable development for cities in China and even around the world. This project is an important business and commercial core of Eco-city Central Area, providing a green platform for cultural exchange and public leisure activities. In our planning, we adopt the gradient design concept. Different function zones are distributed in strips, following the sequence from pure natural landscape, large-scale public buildings, and cultural buildings to urban commercial areas.
