

GUIAN POLY INTL CULTURAL CITY

Service	Concept Planning/Livable City
Location	Guiyang
Client	POLY Group
Scale	86 Hectares
Time	2018

Livability is formed at the intersection of the four systems. Livability not only refers to climate adaptation or a bench in the park, but also refers to the feeling that when you are in a place, its surrounding environment makes you want to stay. This sudden sense of happiness and energy comes from the overall environment. We are committed to design livable urban environment. Cities are complex. The challenges faced by policy makers are interdependent and subject to comprehensive legal and regulatory constraints. Considering the complexity of cities, we propose a method. Through this method, we can test and positioning a city based on its urban goal and establish the knowledge base for solutions to urban design.
